

Individual Reflection Week 18

Elvina Fahlgren

06-05-22

What do I want to learn or understand better?

I have learned the basics of TypeScript and React. I have also started learn about the usages of custom types in TypeScript, but I would like to learn more about it. This may not be the team's priority right now, since we need to focus on the categorization. However, if we have time to improve our code in the end of the project, that could be a great time for me to learn about best practises within TypeScript and React.

When it comes to the categorization, I want to learn how we in the best possible way can create the categorization with the time that we have left on the project. To do so, I think that having discussion within the team, where we can share our ideas and knowledge, will help us a lot, and that we can implement something create.

How can I help someone else, or the entire team, to learn something new?

As I said, I started to learn about custom types in TypeScript during this sprint. I created types for the JSON data that we get from the backend. This may be something that I can learn the other team members, since they are new to writing in TypeScript as well.

What is my contribution towards the team's use of Scrum?

I was scrum master during this sprint. Since we have written a guide for the scrum master, and other team members already have been scum masters, it was easy to know what to do. For example, I held daily stand up meetings, booked group rooms for the team to have the meetings in, made sure that everyone was filling in the KPIs and also that we did the sprint review and the sprint retrospective. In addition to this, I participated by discussing user stories and their velocity, and planning the sprint.

What is my contribution towards the team's deliveries?

During this sprint, I worked with made up categories (vowels and consonants), and with displaying it. We managed to create these categorization in the back-

end, and also to create carousels containing the different categories. It went really well even though we struggled a bit with the carousels in the beginning. I also believe that working vertical, as we did during this sprint, allowed us to deliver something valuable for the customer quickly. Furthermore, I participated on the team reflection as usual.
