

Individual Reflection Week 19

Julia Ekeblad

16-05-26

What do I want to learn or understand better?

There is still so much about react that I would like to learn. We talked about making the website a multi-page website as well. I have done that in pure html but I assume that it will be a bit more difficult in React. We struggled with showing the results from the search-bar this week so I plan to look into that and see if we can solve it or if it's better to replace it with another solution that does both the search-bar and the result list instead of trying to implement them one by one.

How can I help someone else, or the entire team, to learn something new?

Hopefully I come up with something that might help for the search results. This week was a struggle so I didn't really teach anyone anything, we mostly tried to find a solution.

What is my contribution towards the team's use of Scrum?

I participated in all the scrum-activities we had, such as planning, review, stakeholder meeting, etc. So about the same as the previous weeks.

What is my contribution towards the team's deliveries?

I worked on some responsive features as well as the search results and the tags. We didn't finish the search results but the other user stories went really well.
