

Individual Reflection Week 13

Elvina Fahlgren

01-04-22

What do I want to learn or understand better?

We have now decided what project we are going to do - create a new website for Tisckster. I have never built a website before, and therefore I want to learn how to do it. We have not decided what languages to write in, but we will probably write in React or Vue, JavaScript and C#. I have only programmed a bit in JavaScript, and I want to learn more about it and also learn the other languages that we are going to use. To learn all this, I think it would be good to look at examples online and learn by doing.

How can I help someone else, or the entire team, to learn something new?

I think that the team can help each other when it comes to learn the new programming languages. I can do research and share my findings to the team so that we all can learn. I may also be able to help the team with programming by my skills from previous programming courses and what I have learned on my spare time.

What is my contribution towards the team's use of Scrum?

Next week, we are going to start the first sprint. I think my contribution towards the team's use of Scrum will be to, together with the team, plan the sprint and come up with epics and user stories.

What is my contribution towards the team's deliveries?

My contribution to the team's deliveries this week has been to plan the project and create the business model canvas, the mockup and the Definition of Done. As said in the previous week reflection, for the upcoming weeks I want to actively participate on the deliveries that we will make, which I can do by continue to attend meetings, contribute with ideas and work on the project.
