

# Individual Reflection Week 15-16

Kevin Zhao

24-04-22

## **What do I want to learn or understand better?**

Now during the second sprint of the project, I have realised that despite wanting to learn about most aspects of the project, it will be better for the team if I stick to the backend-side of the project. However, as I am not confident in my ability to write code of quality, I want to be able to understand Java better, especially combining it with JSON.

## **How can I help someone else, or the entire team, to learn something new?**

As I am not the most experienced programmer, I have to rely on searching for most answers on the web or ask a team member for help. I think that by encouraging the fact that there will be many new and unknown parts of programming in this project, the team can help each other find answers and collectively learn lots of new things.

## **What is my contribution towards the team's use of Scrum?**

Although I wasn't the Scrum Master, I tried to improve our Scrum methodology by referencing our sprint planning to what was presented in the course as the last sprint didn't go that week in terms of velocity and work done. Even though it still didn't go as well as expected I believe the team is learning more with each sprint.

## **What is my contribution towards the team's deliveries?**

As I was away for the latter half of the sprint, I mostly tried to contribute by assisting Ingrid and Elvira with connecting the backend to the API. I wouldn't say I contributed with that much but I tried my best to help them and understand the code.
