

Individual Reflection Week 13

Ingrid Stake

01-04-22

What do I want to learn or understand better?

Since we have now decided on our project scope, there are a couple of already known things that we will have to learn. I think I am more interested in working on the project back-end and thus interact the our API. I currently don't know exactly what that exact things I need to accomplish this yet, but that is what I am most curious about and thus what I want to learn.

How can I help someone else, or the entire team, to learn something new?

I have some experience when it comes to working in Visual Studio and C# which we we might be using for the project. If we decide to do so, that could probably be helpful to others. I think I might also be able to help breaking down problems or tasks into smaller ones so that they will be easier to tackle for the team.

What is my contribution towards the team's use of Scrum?

Since the first sprint starts Monday, scrum has not really been relevant for this week's work. But I suppose that in the role of Product Owner I have started to think about what might be good epics and user stories for the product backlog.

What is my contribution towards the team's deliveries?

I arranged the project with Tickster for our group and provided necessary information about the project to the group so that we together could make the mockup and business model canvas as well as the Definition of Done.
