

Individual Reflection Week 14

Elvina Fahlgren

08-04-22

What do I want to learn or understand better?

At the beginning of the first sprint, we decided to use C# as backend together with ASP.NET Core as framework. Since there were problem loading the project with Mac, we decided to go with Java as backend together with Spring Boot as framework. I have never used Spring Boot before and want to learn how it works. Also, I want to learn more about Typescript and React (the programming languages we are using for the frontend). Furthermore, I want to understand how the backend and frontend can "communicate" with each other. The easiest way to learn all this would probably be to follow tutorials, for example how to set up the backend with Spring Boot.

How can I help someone else, or the entire team, to learn something new?

This week, I have tried to help the team by (together with the team) attempting to set up the project with ASP.NET Core. It did not went very well, so for the next sprint I want to make it work and thereby help the team to set up the project (in Spring Boot instead).

What is my contribution towards the team's use of Scrum?

For this sprint, my contribution towards the team's use of Scrum was to plan the sprint and come up with epics and user stories. I participated on the meetings, sprint review, and sprint retrospective. I am still not fully confident with the key rules of Scrum, but I think I will learn while working with it.

What is my contribution towards the team's deliveries?

In the first sprint, we were not able to deliver anything to the client more than a simple local "Hello-World" web page with React. We helped each other to make it work for everyone. For the Team Reflection participated by discussing and writing down, together with the team, how the first sprint went.
