

Individual Reflection Week 17

Kevin Zhao

29-04-22

What do I want to learn or understand better?

With a working API connected to our backend I would like to learn how to extract the data in different ways so that we can start categorizing the events. As we had some discussions regarding the creation of user stories I would like to learn how to define them better as well so the team can better understand the tasks ahead of us. Also I want to learn more about scrum in general for when I become the scrum master.

How can I help someone else, or the entire team, to learn something new?

As I have mentioned the previous weeks I can mostly help with the communication in our team, to encourage the sharing of information and solutions. As I was away during the first two days of the sprint I really appreciated our communication as I quickly managed to get back on track.

What is my contribution towards the team's use of Scrum?

Since I missed out on the sprint planning as well as the sprint review and retrospective due to work I feel like I have contributed very little towards the team's use of Scrum. However the days when I participated I encouraged thorough daily scrums as I wanted to catch up to the project.

What is my contribution towards the team's deliveries?

As I was away and worked during the last day I feel like my contribution towards the team's deliveries was very limited this sprint. I tried to convert the array back to JSON and I thought I had solved it but it didn't work unfortunately.
