

Individual Reflection Week 19

Ingrid Stake

15-05-22

What do I want to learn or understand better?

This week, I've been working a little bit on the frontend and even though react is still a bit mysterious to me it does not feel too bad. So for next week I would like to learn even more. Some members have been working with the search bar this week, but there were some issues with displaying the search result. I would like to see if I can help solve that and thus probably learn quite a bit of react.

How can I help someone else, or the entire team, to learn something new?

I think I have become quite good at searching for good information and tutorials which can be helpful to others. I think that I also can help others developing good, systematic methods for troubleshooting the code when there are issues.

What is my contribution towards the team's use of Scrum?

Again, I have participated in all meetings - planning, review and daily. As a team, we collectively wrote the user stories and estimated their costs for this sprint.

What is my contribution towards the team's deliveries?

This week we created backend part of the tags, as well as included them in the UI, though, they do not yet have any functionality connected to them, that will be happening next sprint. I also participated in making the new version of the categorization algorithm that is now starting to look half-decent. Further improvements will have to be done during the next sprint.
