

# Individual Reflection Week 16

Martin Toremark

2022-04-22

## **What do I want to learn or understand better?**

I want to understand React, Typescript, HTML and CSS better. This will be achieved by looking up relevant information to support the development during next sprint. Besides things related to the frontend, I also want to understand better how we should classify all the events. Since we haven't discussed it yet in the team of how we should solve it, the learning I have to do will be determined during the sprint.

## **How can I help someone else, or the entire team, to learn something new?**

I have continued to share relevant links for our work and explained relevant concepts, when I understood it, to the other team members. I will continue to do this during next sprint.

## **What is my contribution towards the team's use of Scrum?**

I have continued to support the team during all Scrum events during the sprint, and I will continue to do so. When we as a team have been unsure what to do, I have often looked up information about Scrum that could clarify things for us.

## **What is my contribution towards the team's deliveries?**

I helped the team deliver points related to the frontend development. We managed to deliver all of our user stories that were related to the frontend, except for the user story that aimed to connect the backend to the frontend. The focus for the next sprint is to get the connection between the frontend and the backend to work, continue to develop the user interface and to start the development of our algorithm for the classification of events.
