Individual Reflection Week 16

Elvina Fahlgren

22-04-22

What do I want to learn or understand better?

As I wrote in the individual reflection in the last sprint, I still want to understand how the backend and frontend can communicate. Also, I have not been working anything with React and TypeScript yet, since I have been working with the backend. Next sprint, I want to work with the frontend and therefore learn about React and TypeScript. And since we need to start communicating between the backend and frontend, I will hopefully learn how to do that as well.

How can I help someone else, or the entire team, to learn something new?

During this sprint, I learned how to set up the project with Spring Boot, and did my best to explain to the team how it worked and how they could make it work on their computers. For the next sprint, I am not sure if I can help my team very much since I will be working with a programming language I am not used to. Rather, I think that my team will help me learn React and TypeScript!

What is my contribution towards the team's use of Scrum?

My contribution towards the team's use of Scrum this sprint was, as it was in the last sprint, to plan the sprint and come up with user stories. I could not participate in every meeting because I was away during one half of the sprint. I could not participate in the sprint review and sprint retrospective. Next sprint, I will not be away, and therefore I will be participating in the sprint review and sprint retrospective.

What is my contribution towards the team's deliveries?

Since I was away during the end of the sprint, I was not able not to participate while making the team reflection. However, I contributed by setting up the project with Spring Boot and, together with the "backend team", retrieving data from Tickster's API.
