Individual Reflection Week 17

Elvina Fahlgren

29-04-22

What do I want to learn or understand better?

During this sprint, I learned I lot about React, TypeScript, CSS and Bootstrap, with help from my teammates. I also learned how the fronend can retrieve data from the backend. Since I have been working on the frontend this sprint, I want to understand what the "backend team" has done and how the backend now is working since there have been some changes there. To understand how the backend is built now, I will probably try to read it through and ask my team members if there is something that I don't understand.

We had our first meeting with the stakeholder this sprint, and I learned how such a meeting can be performed and I will take that with me until next time. I will then be better prepared and ask relevant questions.

Furthermore, I want to understand how we can make some kind of categorization (which is the project scope). To do so, I believe that we should start with something very simple (e.g. categorization by vowels and consonants).

How can I help someone else, or the entire team, to learn something new?

As predicted in my last individual reflection, I was not able to help my team very much during this sprint since I had not been working with the frontend, but they had. During the next sprint, I hope that I can help someone, that has not been working with the frontend, to learn what I have learned. To do so, I can explain but also write down documentation in the code so that the code is easy to understand.

What is my contribution towards the team's use of Scrum?

During this sprint, I contributed to the team's use of scrum by planning the sprint, discussing velocity, and coming up with user stories. I participated in the sprint review, sprint retrospective, and meeting with the stakeholder. During the next sprint, I will continue to participate in the meetings and follow the agile approach to working.

What is my contribution towards the team's deliveries?

I have been creating the event cards, together with my team, during this sprint. I also contributed to the team reflection. I want to continue contributing to the team's deliveries as I have been doing. Hopefully, we can start working more individually now that we have a good codebase, and I will be able to contribute even more.
