Individual Reflection Week 14

Ingrid Stake

08-04-22

What do I want to learn or understand better?

In the beginning of the sprint we decided to go with ASP.NET Core for the backend and react for the frontend. This however turned out to be a problem since the project was not able to load properly for the members who has Mac. We were not able to solve this, but instead decided to use Java Spring Boot for the backend instead, which according to our research should work better. So I want to learn how Spring Boot works and how to use it to create APIs for the frontend to display.

How can I help someone else, or the entire team, to learn something new?

By doing a little bit of reasearch on Java Spring Boot before the start of the next sprint, I hope to be able to get us started quicker. I think that I can also be a good sounding board for the other members if they were to bump into problems during the project.

What is my contribution towards the team's use of Scrum?

I think that for the first sprint, since we are still new to Scrum, the team has made communal contributions during our discussions on how we implement Scrum in practise. I also participated in the sprint planning meeting were we set up a plan and goals for the week. I would still argue that these were reasonable and reachable had we not had such problems with the development environment. For the sprint review and sprint retrospective I contributed during the discussions including when we evaluated the sprint in terms of how to improve the team's use of scrum for the next sprint.

What is my contribution towards the team's deliveries?

Due to our major problems we head when we were to start the project, the team has not really been able to deliver anything substantial during this sprint. We all managed o download Node and React and get a very simple, "Hello World"-like web page. We helped each other to get this to work for everyone.
