Individual Reflection Week 14

Tove Nilsson

08-04-22

What do I want to learn or understand better?

In the first print we decided to work with C# as the backend together with ASP.NET Core and React as the frontend. The team and I had not done enough research to understand that this would not work with MacOS. The first sprint did therefore not provide any costumer value. After that we took a step back and decided to work with Java Spring Boot as backend. I have not worked with Spring Boot, or the languages Typescript and React before so this is something that I want to learn to be able to contribute to the project. To achieve this, I will look at tutorials, do research and discuss with my team members that have previous knowledge. I also want to learn how to better set the velocity for the sprints and how to estimate the cost for the user stories, which I think I will best do by "learn by doing".

How can I help someone else, or the entire team, to learn something new?

Since i have no previous knowledge about any of the technologies we are going to work with, I can only share the research I do with my team members.

What is my contribution towards the team's use of Scrum?

I participated in the sprint planning meeting, were we discussed the goal for the week and wrote the user stories. During the sprint I, together with the team, worked on the user stories. I also contributed during the discussions for the sprint review and sprint retrospective where we reflected and evaluated the sprint and how to improve it for the next sprint.

What is my contribution towards the team's deliveries?

Since we had problems in the beginning of the project, we have not actually provided any customer value at this point. So my contribution towards the team´s deliveries this week was to get a very simple "Hello World" web-page and the sprint review and sprint retrospective.
