Individual Reflection Week 16

Tove Nilsson

22-04-22

What do I want to learn or understand better?

Since the project is going forward right now and I am for the most part working on the frontend I want to learn more about react, typescript and css. This will help me and the team to better understand what to do and develop the frontend. To achieve this I will look at tutorials and discuss with my team members about their knowledge. Since we are still learning how to work with scrum and the new technologies it is still difficult to estimate the velocity and the cost so this is something I want to be better at. I think the only way is to "learn by doing" and to reflect on the previous sprints.

How can I help someone else, or the entire team, to learn something new?

As I said in the last sprint I still don't have so much knowledge about the new technologies. I am starting to learn and the only thing I can do is to share the research I do with my team members.

What is my contribution towards the team's use of Scrum?

Just as last sprint I participated in the sprint planning meeting, were we discussed the goal for the week and wrote the sprints user stories. The team voted and discussed about the velocity and the cost. During the sprint I, together with the team, worked on the user stories. I also contributed during the discussions for the sprint review and sprint retrospective where we reflected and evaluated the sprint and how to improve it for the next sprint.

What is my contribution towards the team's deliveries?

This sprint I contributed by working on the user stories related to the frontend development. I, Oliva, Julia, and Martin worked together on the user stories and the basic setup of the frontend. If there was a problem we all helped to do research and discussed on how to solve it. I also contributed to the team reflection.
