Individual Reflection Week 14

Julia Ekeblad

10-04-22

What do I want to learn or understand better?

We didn't have such a successful first sprint. We tried to set up the project using C# for the backend and React/Typescript for the frontend. I want to learn how these work together and since I haven't worked in any of these before I would like to learn that as well.

How can I help someone else, or the entire team, to learn something new?

I continued with some React tutorials this week and hopefully that will help the team in future sprints when we start using React.

What is my contribution towards the team's use of Scrum?

I was chosen as Scrum Master this week. It was really confusing for me and since I was the first one I don't really think I got much of it right. But I hope that the others can learn from my experience when it's their turn to be Scrum Master.

What is my contribution towards the team's deliveries?

We haven't actually delivered anything this sprint. But I tried to help out where I could in order to get a functioning project structure. We also had our very first sprint review, retrospective and reflection where we all googled to find out how to do and I think I found some helpful things there.
