Individual Reflection Week 14

Kevin Zhao

08-04-22

What do I want to learn or understand better?

Now that we have gotten started, I want to understand Java better in order to create a functional backend for the website. I also want to learn more about React, TypeScript, HTML and CSS better in order to understand both ends of the project.

How can I help someone else, or the entire team, to learn something new?

Primarily through communication with the group. By being active and discussing what we don't understand and look for solutions I will be able to help the team to learn about new things in the project.

What is my contribution towards the team's use of Scrum?

During our meetings I have tried to steer the direction towards the guidelines of the Scrum methodology by suggesting how we can improve our daily scrums and as well as the reviews and retrospectives. I also defined more user stories together with the team so the team can understand the deliverables better.

What is my contribution towards the team's deliveries?

Although we faced a lot of problems during this sprint, I tried to help my team getting started with React and the other softwares needed in order to complete more user stories next sprint. We managed to create a locally hosted website saying "Hello World".
